Profile

Final Semester Computer Science student at National University of Computer and Emerging Sciences (NUCES-FAST), Islamabad, specializing in Mobile Application Development, MLOps, Web Development, and UX Engineering. Experienced in building end-to-end MLOps pipelines, full-stack web and mobile applications, and production-grade deployments using Docker, Kubernetes, and cloud platforms. Adept at UX research, prototyping, and technical writing, with demonstrated ability to lead collaborative engineering projects from concept to deployment.

Education

National University of Computer and Emerging Sciences (NUCES-FAST), Islamabad, Pakistan	December 2026
<i>B.S. in Computer Science - Expected Graduation: December 2026</i>	
· Majors: Mobile Application Development, Web Development, Data Visualization, MLOps, UX Engineering, Operating Systems, Computer Networks, Software Project Management	
Punjab College for Women, Sargodha, Pakistan	2021
<i>Higher Secondary School Certificate. - Physics, Chemistry, Mathematics</i>	
Govt. Comprehensive Girls High School, Sargodha, Pakistan	
<i>Secondary School Certificate. - Physics, Chemistry, Mathematics, Biology</i>	
Experience	2019

Freelance Content Writer	Sep 2024 - May 2025
<i>USA-Based Clients - Remote (Ranklogs, Finocircle, Fitspresso)</i>	
· Produced SEO-optimized articles, technical manuals, and long-form content across technology, wellness, finance, and academia verticals for international clients	
· Delivered consistent, high-quality writing under deadline-driven environments, building a reliable reputation across multiple client accounts	

Projects

QuickAid - Disaster Management Mobile Application <i>Bluetooth Mesh, Android, NGO Coordination</i> Final Year Project
· Engineered a disaster emergency communication app leveraging Bluetooth mesh networking to enable device-to-device communication when cellular networks are unavailable, supporting critical scenarios without internet connectivity
· Built NGO coordination module, volunteer management dashboard, and real-time resource tracking system to streamline disaster relief operations at scale
E-Commerce Ad Creative Generator <i>FastAPI, Kubernetes, MLflow, Airflow, T5, AWS EKS, GitHub Actions</i>
· Built a production-grade MLOps pipeline fine-tuning a T5 transformer model for automated ad copy generation, deployed on AWS EKS with GitHub Actions CI/CD and Prometheus/Grafana observability
· Orchestrated model training and retraining workflows via Apache Airflow; integrated MLflow for experiment tracking, model versioning, and registry management
Fake News Detection Pipeline <i>DVC, MLflow, Scikit-learn, Flask, Python</i>
· Developed a reproducible end-to-end ML workflow with DVC data versioning and pipeline stage tracking, MLflow experiment logging, and hyperparameter comparison across classification models
· Deployed a Flask frontend for real-time inference with model registry integration, enabling version-controlled production releases
Learning Management System (LMS) <i>React, Node.js, MongoDB, Express.js</i>
· Built a full-stack educational platform with an admin dashboard supporting structured course content management, student enrollment, role-based access control, and dynamic content filtering
· Implemented RESTful API backend with Node.js/Express and a responsive React frontend with real-time state management
Corporate Vendor & Contract Management System <i>MySQL, Node.js, HTML/CSS</i>
· Designed and developed a role-based procurement management system covering vendor registration, contract lifecycle management, purchase order tracking, and budget monitoring with MySQL triggers and stored procedures
· Built a Node.js backend with full MySQL integration, enforcing data integrity constraints and automated audit logging across all procurement workflows
Shuttle Bot - Autonomous Sports Robotics System <i>ML, Computer Vision, Robotics</i>
· Designed an autonomous robot concept for shuttlecock detection, real-time navigation, collection, and placement using ML-based computer vision and robotic control algorithms
· Integrated object detection with motion planning logic to enable reliable operation across dynamic court environments

Additional Projects

· My Beauty Assistant - MERN Stack App <i>MongoDB, Express.js, React, Node.js, Personalized Recommendations</i> GitHub	· Advanced Classroom Management System <i>C++, OOP, File Handling, Authentication, Assignment Management</i> GitHub
· SmartWait - Context-Aware Queue System <i>UX Engineering, Figma, Wireframing, Prototyping, A/B Testing</i> GitHub	· Servisync - Service Management System <i>JavaFX, OOP, Database Systems, Design Patterns, Role-Based Access</i> GitHub
· Stock Prediction System <i>Jenkins, Docker, CI/CD, Webhooks, Multi-Branch Deployment</i> GitHub	

Certifications & Training

Create Charts and Dashboards using Google Sheets	Oct 2021
<i>Coursera Project Certificate</i>	
MLOps Intensive Coursework	
<i>CI/CD Pipelines, Docker, Kubernetes, Monitoring Systems, Workflow Orchestration</i>	
UX Engineering Coursework	
<i>Information Architecture, Wireframing, Prototyping, A/B Testing</i>	

Achievements

Scholarship Recipient - Fauji Foundation Pakistan	2019
Certificate of Merit - KIPS Academy	2020
A+ Grade in FYP-1 (Final Year Project Phase 1)	2025

Activities

University's Technical Projects & Collaboration
<i>Active participant in end-to-end team engineering projects across MLOps, full-stack development, and UX design</i>

Technical Skills

Programming Languages: Python, JavaScript, Java, C++, SQL, HTML, CSS
Frontend & Mobile: React.js, Android Studio, Figma, Pencil, Canva, Adobe Photoshop
Backend & APIs: Node.js, Express.js, FastAPI, Flask, RESTful APIs
MLOps & Data: MLflow, DVC, Apache Airflow, Prometheus, Grafana, Scikit-learn
DevOps & Cloud: Docker, Kubernetes, Jenkins, GitHub Actions, AWS EKS, Git
Databases: MongoDB, MySQL, SQL Server
Professional Skills: Technical Writing, UX Design, User Research, Leadership, Team Collaboration, Bluetooth Mesh Networking, UML, Proteus
